

Company Profile

In 1992, Sanjay Chetal immersed himself into the Malaysian automotive industry as an eager engineering graduate from India. Throughout his early years in the Malaysian automotive industry, he developed an immense breadth of technical knowledge, along with extensive experience in the field. In 2003, Sanjay founded Talbro's Precision Management Sdn Bhd (Talbro's).

Initially, Talbro's started as a Tool and Die designing and manufacturing company, inspired by Sanjay's early career as a design engineer. In 2005, within two years of being in the manufacturing industry, Talbro's added a new facility to manufacture machined tubular parts for the automotive industry. With the pre-existing infrastructure and customer base, Talbro's quickly established itself as a reliable and efficient component manufacturer by 2007, in the span of only two years.

In 2007, after four years of Talbro's' existence, the business plans were re-evaluated. Sanjay decided to shift Talbro's' focus solely on manufacturing tubular components. Consequently, Talbro's has been able to create a niche market for this sector.

In 2010, Talbro's had reached a very notable and significant milestone. Talbro's had been promoted to second tier vendors, allowing them to secure contracts with various tier one vendors of car manufacturing companies. Being confidently assigned bigger contracts and projects, Talbro's developed an expertise in components of different car modules. Talbro's enhanced its manufacturing competence for Front and Rear Axle modules, Front and Rear Seat Frame modules, Instrument Panel Tube modules, and Suspension modules.

In 2018, Talbro's shifted its operations to a newly built 22,000 ft² factory in Sungai Buloh. After the shift in base of operations, Talbro's maintained two manufacturing facilities and one storage facility for their raw materials — all situated in Sungai Buloh.

With their unparalleled technical skills and manufacturing know-how, Talbro's was quickly acknowledged as a significant contributor in developing prototypes and mass production of components. Talbro's works closely with Research and Development departments of major vehicle manufacturers.

Talbro's Precision Management Sdn Bhd has been granted certification as an **ISO9001:2015** company.
